FULL-STACK & APPLIED AI ENGINEERING LEAD

Python & Angular | Enterprise Architecture | Forward Deployed Engineering

PROFESSIONAL SUMMARY

Engineering Lead with 10+ years of experience delivering enterprise software across financial services, banking, procurement and telecommunications. Experienced in Angular/TypeScript architecture, Python API development, REST API design, real-time systems, Kafka, WebSockets, SQL-backed integration and Docker environments. Built AI-assisted engineering workflows, contributed to MCP tools, automated quality gates and Grafana observability. Combines hands-on delivery with team leadership and stakeholder collaboration; focused on FastAPI, RAG, LLM applications, AI agents and enterprise AI solutions.

TECHNICAL SKILLS

Frontend Technologies: Angular (v2–v20), TypeScript, JavaScript, RxJS, NgRx, Signals, Standalone Components, Zoneless Angular, HTML5, SCSS, Nx, Module Federation, Micro-frontends

Backend & API Engineering: Python, FastAPI, REST APIs, Pydantic, API Contracts, Async Programming, Node.js, Authentication & Authorization, pytest

Databases & Messaging: SQL, PostgreSQL, SQLAlchemy, Relational Data Modeling, Apache Kafka, WebSockets, Real-Time Data Processing

Applied AI & Agents: LLM APIs, Retrieval-Augmented Generation (RAG), Embeddings, Vector Databases, Semantic Search, AI Agents, Agentic Workflows, Tool Calling, Model Context Protocol (MCP), Prompt Engineering, LLM Evaluations, Guardrails

DevOps & Engineering Quality: Docker, CI/CD, Git, GitHub Hooks, Grafana, Logging, Observability, Jest, Playwright, GitHub Copilot, Claude Code, AI-assisted PR Quality & Security Gates

Architecture & Leadership: Enterprise System Design, Event-Driven Architecture, Performance Optimization, Financial Dashboards, Stakeholder Collaboration, Team Management, Technical Mentoring

PROFESSIONAL EXPERIENCE

FICO, Bengaluru, India

Lead Engineer, July 2025 – October 2026

- ✓ Led development of Angular 20 micro-frontends for credit-scoring and hotlisting products using Nx, Module Federation, Signals and reusable libraries shared across teams.
- ✓ Developed Python-based APIs and contributed to REST API design, engineering standards and integration with SQL-backed services using AI-assisted development workflows.
- ✓ Built WebSocket-driven dashboards for large datasets, interactive charts and long-running asynchronous operations with responsive user experiences.
- ✓ Co-developed and used MCP tools integrated with Jira, Figma and Confluence to accelerate requirements-to-UI workflows while reviewing AI-generated changes for code quality.
- ✓ Contributed to GitHub hooks and AI-enabled pull-request gates for automated quality and security validation.
- ✓ Worked on Docker-based deployments, Grafana logging and application observability to support reliable engineering operations.
- ✓ Managed UI engineering delivery and partnered directly with Product Owners and UX teams to scope requirements, refine solutions and coordinate implementation.

Morgan Stanley, Bengaluru, India

Senior Manager, August 2021 – July 2025

- ✓ Led end-to-end delivery of fixed-income pricing and portfolio optimization applications, translating trading workflows into scalable full-stack solutions.
- ✓ Designed REST API contracts connecting Angular applications with Python-based quantitative services and third-party engines for portfolio calculations and optimization.
- ✓ Worked on server-side concurrency, Apache Kafka message streams and WebSocket synchronization to reflect pricing changes across concurrent users.
- ✓ Built data-intensive analytics dashboards with Angular, RxJS, Plotly and Highcharts, supporting real-time market data and long-running computations.
- ✓ Delivered applications automating repetitive workflows previously managed through kdb+ and Excel, partnering directly with business stakeholders from discovery to rollout.
- ✓ Worked with Docker environments; led architecture, technical roadmaps, code reviews and mentoring of engineering consultants. Adopted GitHub Copilot for AI-assisted development.

FIS (Fidelity Information Services), Bengaluru, India

Software Engineer II, December 2019 – August 2021

- ✓ Independently owned frontend modernization for commercial banking workflows, including ACH transactions, within a unified banking solution.
- ✓ Debugged legacy .NET application behavior to understand business flows and integrate revamped Angular components with existing services.
- ✓ Developed reusable design-system components with WCAG-aligned accessibility and improved frontend performance across banking modules.

Zycus, Bengaluru, India

Associate Tech Lead, July 2018 – December 2019

- ✓ Developed and integrated Node.js-backed functionality alongside modular Angular applications for enterprise procurement workflows.
- ✓ Built an in-house reusable Angular component library with design-system patterns comparable to Angular Material.
- ✓ Led and mentored engineers, promoting maintainable architecture, shared components and consistent delivery practices.

Infosys, Bengaluru, India

System Engineer / Full Stack Developer, January 2016 – July 2018

- ✓ Delivered full-stack functionality for telecom infrastructure modernization projects across services and frontend interfaces.
- ✓ Developed Python scripts and web scrapers to automate data retrieval and repetitive engineering tasks.
- ✓ Worked in Docker-based environments running containerized services written in multiple languages.

PROJECTS

Restaurant Review Reply Automation | n8n | Independent Project

Built an automated restaurant-review response workflow and shared the implementation in a technical LinkedIn post.

EDUCATION

B.Tech, Computer Science Engineering | Galgotias University | 2016 | CGPA: 9.29/10.0
